Information for Surgery Preparation

SURGICAL INFORMATION PACKET

Dear Client,

Your pet has been scheduled for an upcoming surgery in the near future. In our attempt to assist clients, we have put together this packet to make surgery day as easy and stress-free as possible. In addition to this letter, you will find that the following information has been enclosed:

- 1. Pre-Anesthetic Blood Testing Information Form (**Bring in Day of Surgery**)
- 2. Surgical Information Sheet (**Bring in Day of Surgery**)

Please read carefully all the enclosed information. If you have any questions, please feel free to call us. On your pets' surgery day, we require you to review and sign an **Authorization/Estimate**Form which allows you to choose optional services.

We require a phone number(s) where you can be reached surgery day.

Failure to be reached on the day of the procedure may result in postponement of the surgery.

The night before your pet's surgery...

- Withhold all food and treats after 6:00pm.
- Water may be left down after this time period. Remove water in the morning of surgery.
- If you are currently administering any medications, vitamins and/or injections, withhold the morning doses unless otherwise instructed by the doctor.

Please make arrangements for your pet to be dropped off on the morning of scheduled surgery, unless other arrangements have been made in advance. For example, new clients are required to have a presurgical visit the morning of procedure and may not have an appointment until later. At time of drop off, our team will be happy to answer any questions/concerns and collect the enclosed/completed

Authorization Form.

Our veterinary assistant will escort your pet to the surgical prepping area to wait for his or her surgery. If you have elected any of the recommended blood tests, our veterinary health technologist will collect all blood samples and tests prior to surgery.

If any questions arise, the doctor may contact you at the number on the Authorization Form.

You are welcome to check up on your pet's status, however, we request that you allow plenty of time foryour pet's procedure to be done. At this time, we will be able to give you an idea when your pet may be discharged. When you arrive to take your pet home, the receptionist will bill you out and the veterinary assistant or technologist will go over all discharge orders verbally and give you a written copy. If you do not understand any instructions, please do not hesitate to ask them to go over them one more time.

We hope surgery day will be a pleasant experience. Remember, our team knows surgery can be an anxious time and we are always available to answer any and all questions concerning the upcoming procedure.

We look forward to serving you and your pet on the upcoming surgery day and years to come.

PRE-ANESTHETIC BLOOD TESTING INFORMATION FORM

PLEASE READ CAREFULLY.

Our greatest concern is the well being of your pet. Before putting your pet under anesthesia, we routinely perform a full physical examination.

We also highly recommend and sometimes require that a **Pre-Anesthetic Blood Profile** be performed on all pets' undergoing anesthesia to maximize patient safety.

The **Pre-Anesthetic Blood Profile** helps alert our surgeon to the presence of dehydration, anemia, infection, diabetes and/or kidney or liver disease that could complicate the procedure. These conditions may not be detected **without** a pre-anesthetic profile thus not allowing for the most appropriate and safest anesthetic regime to be administered. These tests are similar to those your own physician would run if you were to undergo anesthesia. In addition, these tests may be useful if your pet's health changes to develop faster, more accurate diagnoses and treatments.

*State of the art equipment enables us to perform the pre-anesthetic blood profile at our hospital and we are committed to making this technology available to our patients.

The **Authorization Form** you will sign on your pet's surgery date will offer pre-anesthetic blood work.

- 1. The Quantitative Blood Count (QBC) and Pre-Anesthetic Profile which includes:
 - CBC: PCV (Anemia), White Blood Cell Count (Infection) & Red Blood Cell Count (Anemia/Bleeding Disorder), Platelet Count (Clotting Disorder)
 - **Profile**: BUN and Creatinine (Kidney), ALKP and ALT (Liver), Glucose (Sugar), Total Protein (Dehydration), and Electrolytes (Imbalance).
- 2. **Owner Elects to Decline** the recommended pre-anesthetic blood tests at this time but requests that we proceed with the procedure. This is indicated by initialling the declined sections of these the optional procedures.

We select tests that give the doctors a suitable overview of healthy patients. However, if the patients are in their senior years (above 7 years old) or are sick, the geriatric panel is recommended. This test needs to be sent to our out of clinic laboratory on a day prior to the procedure. The receptionist will give a quote for this test.

On the **Feline Patient Authorization Form**, our feline owners will see a **FeLV/FIV Test** option. We highly recommend this test be preformed on all feline patients at least once in their lives because Feline Leukemia and Feline Immunodeficiency Virus (Feline Aids) are viruses for which no cure exists. If your pet goes outside, we recommend administering the Feline Leukemia (a series of two vaccinatons) and Feline AIDs vaccines (three vaccinations) as well. Please ask questions if you would like to learn more about Feline Leukemia and Feline Aids.

We realize surgery and anesthesia are scary for both the owner and patient and we attempt to make surgery day as safe and comfortable for all involved. The physical examination and blood work done prior to any surgical procedure allows us to best minimize anesthetic and surgical risks and maximize patient safety.

If you	have	any	questi	ons c	or hesit	ations	about	the sch	nedul	ed	proced	ure,	
pleas	e do r	not h	esitate	to c	call us t	o disc	uss any	aspec	t of th	ne i	upcomii	ng pro	ocedure

CLIENT INITALS	

SURGICAL INFORMATION FORM

PLEASE READ CAREFULLY.

Anesthetic Procedures & Risks

We use a combination of pre-anesthetic medications/injectable and/or inhalant anesthetics to achieve optimum levels of anesthesia that are safe for your pet.

In some cases the veterinarian may request the owner to stay with the patient after sedation to help reduce the anxiety prior to the anesthetic. This is a great help to these patients.

For all anesthetic procedures, your pet is intubated (insertion of a tube into the trachea or wind pipe). This will ensure that your pet is able to receive oxygen at all times and prevents aspiration of any fluids into the lungs.

For procedures that require minimum sedation, an injectable anesthetic is given that produces a good plane of sedation with quick recovery. Anesthesia is maintained with a gas anesthetic, Isofluorane which is very safe and is not metabolized by the body. This allows us to have more control over anesthetic depth and it is less irritating to the airways.

Monitoring & Pain Management-Monitoring of patients during anesthesia is done in two ways. First, a veterinary technician or trained assitant is with your pet continuously from beginning of anesthesia to recovery.

Second for patients receiving spays or neuters, we monitor blood pressureregularly during the anesttic period. For patients over 1 year we recommend additional monitoring with a computerized monitor that records heart rate, pulse rate, oxygen levels, respiration, ECG, core and rectal temperature. For all dental procedures and major surgeries this option is mandatory.

Our clinic strongly believes in compassionate, quality, medical care for our patients. As a result, all surgery patients will receive pain management before, during and after surgery. Additionally, pain medication may be prescribed to go home. Additional information will be given at discharge. We hope this program will reduce any discomfort experienced and aid in a quicker recovery.

Intravenous Catheterization & Fluids

We highly recommend the placement of an IV catheter and use of IV fluids during all anesthetic procedures. This allows us to have quick, available access to the circulatory system (blood) in case of an unforeseen emergency. The fluids help provide support to the circulatory system and prevent dehydration, as well as aid in a quicker recovery from anesthesia.

Potential Surgical Complications

Canine and Feline Spay

1. Bleeding 2. Infection 3. Recurrent Heat 4. Urinary Incontinence 5. Weight Gain 6. Suture Reactions

Canine and Feline Alter

1. Bleeding 2. Infection 3. Testicular Swelling 4. Suture Reaction (Canine Only)

Feline Declaw

1. Bleeding 2. Infection 3. Limping/Lameness 4. Regrowth of Nail

Tumor/Lump Removal

1. Bleeding 2. Infection 3. Swelling and Drainage 4. Suture Reaction

It is important for you to understand that there is always a risk of anesthetic and surgical complications anytime these procedures are performed. We strive to take the highest quality care of your pet and takeall the added precautions you allow to avoid potential problems. Thank you for entrusting your pet to us.
